

Abubakr Elmallah

17-year-old, 5.4 GPA IB Diploma Junior seeking opportunities to apply my skills in computer science and leadership in a challenging and collaborative environment.

EXPERIENCE

THHS Competitive Programming, Trabuco Hills — Treasurer

2022 - 2023 School Year

Managed the club's budget and financial transactions, making sure there had enough money to host events.

Computer Science Club, Trabuco Hills — Vice President

2022 - 2023 School Year

Assisted the President in overseeing club operations and ensuring the smooth running of activities.

Organized workshops and seminars to enhance members' knowledge and skills in computer science.

Was the main tutor for the club, and also in charge of other tutors.

Muslim Student Association, Trabuco Hills — President

2022 - 2023 School Year

Led the association, overseeing all activities and ensuring alignment with the association's mission and goals.

Organized and facilitated weekly Friday meetings, leading most of them and running the communication channels.

Represented the association in school-wide events and liaised with school administration and other clubs.

Muslim Student Association, Trabuco Hills — Secretary

2021 - 2022 School Year

Managed communication within the association, including meeting minutes and announcements.

Assisted the President in organizing meetings and events and hosted many of the meetings.

Maintained records and documentation for the association.

STEM Extreme Club, Trabuco Hills — Director of STEM Workshops

2021 - 2022 School Year

Organized STEM workshops, created posters, contacted organizations and

SKILLS

Computer Science

Computer Science: Proficient in Python, Swift, JavaScript, and Java. Fast typer with a speed of 153 words per minute. Familiar with Windows and MacOS.

Math

Proficient in geometry, algebra 1 and 2, pre-calculus, basic calculus (limits, differentiation, and interaction), as well as statistics.

LANGUAGES

Fluent in English and Arabic. Speak Egyptian Arabic at home and have taken Arabic 1 and Arabic 2 (As in both) at Saddleback Community College.

focused on engaging and interactive learning experiences.

Led all workshops and other tutors and members of STEM Extreme, both online and in person.

Promoted STEM education within the school community, encouraging participation in club activities.

PROGRAMMING PROJECTS

Star Wars Order 66, Scratch Program

2021 School Year during AP Computer Science Principles

<https://scratch.mit.edu/projects/566525662/>

This was the first program I built on my own. As a kid, I made a Minecraft mod in Java, but I had a lot of help and did not really understand the code. This was the first time I fully understood my code as I did it all with no help. It was really fun making it, incorporating my love for Star Wars into it.

Star Wars Dapataad, code.org Web App

2021 - 2022 School Year and Summer during AP Computer Science Principles

https://studio.code.org/projects/applab/3GTPI_9o0qf9zWutRclvLYoJRopnjTmVTdm3cXHElc

This was the first program that I made on my own, but unlike Scratch, this was the first time that I actually typed the code, while in Scratch, you can only use coding blocks. When I first made this app, it was very barebones and could only translate Aurebesh (the alphabet in the app) one way, but I kept on working on it throughout the school year and the summer to make it where it is now.

Calculator, code.org Web App

2021 School Year during AP Computer Science Principles

<https://studio.code.org/projects/applab/3WR9OYO6Ec9k-4s11Py6MlgsYf2YXyuzsq3icY61NWg>

After first making the Star Wars Datapad app, I decided that I wanted to take a break and do something else, and I was bored in school because it was too easy, so I made a basic calculator app.

Periodic Table, code.org Web App

2022 School Year during AP Computer Science Principles

<https://studio.code.org/projects/applab/n4gY-ijCWHme3Gd-qkeYFzcloQkXAf257XCrDwGSxRg>

This was actually part of my AP Computer Science Principles exam, where students had to make their own creative programs. Most people in my class needed only 30 lines of code, but I went above and beyond because it was so fun to me. I got a 5/5 on the AP test.

VOLUNTEERING

Accumulated over 70 hours of volunteering throughout high school. Active as an NHS (National Honor Society) and CSF (California Scholarship Federation) member. Frequently volunteer for my mosque.

I have also led my own volunteering projects for these clubs, mainly my Ramadan mosque event where I organized a team of 10 to volunteer at the mosque to help them with things that they need.

Games, code.org Web App

2022 School Year during AP Computer Science Principles

https://studio.code.org/projects/applab/40V7TcnK871VxSAjbl-VFHSF06Hk2F6qvp6tzq_kRM

After AP tests were done sophomore year, I was very bored and classes were still way too easy for me, so in class, I decided to build this program. The Checkers app was my personal favorite but it was also extremely hard. My code in all of these code.org apps is not extremely efficient because I was only a sophomore then, but my current code has improved quite a lot.

Periodic Table, Coding Rooms Program

2023 School Year during AP Computer Science A

<https://app.codingrooms.com/w/Yxexan1LM35u>

https://docs.google.com/document/d/1-IHKxY_Qv-vF2sONmrZkXOA7E15jg7ZKjcuSTrx-Au/c/edit?usp=sharing

This was part of my IB Computer Science SL Internal Assessment, which required students to build a program and then write a documentation essay about it. I got a 7/7 on the Internal Assessment, and I know that I am going to get a 7/7 on the exam. The documentation was around 85 pages. This was basically a continuation of the code.org web app, but it was made with Java.

Islamic Pillars, iOS App

2023 School Year during AP Computer Science A

Beta Testflight Link: <https://testflight.apple.com/join/KZHB6USO>

Ever since I got a phone and downloaded Islamic apps (like Athan and Quran apps), I was always disappointed, thinking that they did not have everything. I always wanted to be creative and create my own projects, but I was not knowledgeable enough to do any of this. However, with everything I learned about object-oriented programming, I understood Swift more. I watched many videos and I decided to embark on the adventure of making my first iOS app. Just like the Games app, after AP and IB tests, I was bored and classes were easy. So I spent the time learning how to code in Swift and making this app.

Datapad - Aurebesh Translator, iOS App

2023 summer

Still in it's early alpha phase

I wanted to continue the Datapad code.org app, but make it in an iOS app. Unfortunately, I have been very busy with the Islamic Pillars app, but I made a prototype of this app, but it is very early in its development stage.

AWARDS

Perfect Attendance

I have had perfect attendance at school since 7th grade, up to 11th grade other than for tennis match bus days and one sick day.

First Place at Chemistry Event

Nine top students were picked out of all of the sophomores to take the First Year Orange County American Chemical Society exam, and I got first place at my school where the average of the county was 58/90 and I got a 63.1/90.

IB Knowledgeable Award

Out of 72 students in the IB

Diploma class, I was given the IB Knowledgeable award, which meant that all the teachers believed that I was academic enough to get the achievement.

Career Technical Education

This award is given to students who completed AP Computer Science Principles and AP Computer Science A and had at least a B. I had an A in both classes.
